

BIOGRAPHY

Near Earth Object is a dj and producer from Utrecht, the Netherlands. After buying his first recordplayers and 12"-es there simply was no turning back. Starting as a resident dj in a local club was the first step in learning how to please the crowd with a diverse mix, working with VJ's, and performing with some of the biggest names in the electronic music business.

After several years of dj-ing at most of the major technoclubs and radiostations Near Earth Object got more and more interested in making his own music. Years went by, slowly building a good home studio and learning different techniques.

Finally Near Earth Object started releasing his own tracks and several remixes for other artists. In 2010 his own netlabel Program.Records was born. Like his own tracks, the label tries to promote electronic music without being limited by just one single style. Both as a dj and a producer Near Earth Object blends techno, electro, house, dubstep and broken beats to form a diverse and interesting mix of contemporary electronic music.
